

Height-Adjustable Bases

FLAT Tech's new height-adjustable table bases raise or lower with the press of a lever. Operators can adjust a table's height instantly to accommodate guests with accessibility requirements and easily set up functions or dining-room layouts for which different table heights are required by combining dining-, counter- and bar-height table options in one flexible base. The height-adjustable tables also automatically stabilize themselves on uneven surfaces, ensuring a wobble-free experience.

Minimalist Arm Chairs

With its striking minimalist design, the Ziggy arm chair from Motivo creates a bold statement of contemporary style and art. These stackable (to four high) chairs are available in several finish options: beechwood back and seat, beechwood back and upholstered seat, or upholstered back and seat on a black or white (standard) powder-coated metal frame. Total dimensions measure 21 inches wide by 22 inches deep and 28.5 inches high, with a seat height of 18.5 inches.

Mid-Century, with a Twist

The new Sigsbee seating collection combines classic, mid-century design elements with unexpected and modern upholstery twists, including a nylon buckle attachment. Created in collaboration with American design firm Filter Studio, the chairs feature steam-bent wooden frames with angular legs supporting upholstered seats and back pads. Alongside its traditional yet sophisticated aesthetic, Sigsbee's design prioritizes comfort and personalization. While the scale is efficient, the proportions are generous and the upholstered pads contour the body. Even in its basic, all-wood variation the chair is ergonomically supportive and comfortable.
